P/N.: HDCN-DUMMY1
Item Name: HDMI Dummy plug

The 4K HDMI Dummy plug is used to simulate a virtual screen on your desktop, with resolutions up to 4K@30Hz as if a physical screen were connected. Ideal for GPU operations such as crypto currency mining, rendering, Simulations and Virtualization

Features/Specifications:
- Connector: Gold plated HDMI Male
- Plug and play on Windows/Mac OS/Linux (no drivers, external power needed)
- LED indicator to show the working status.
- Enable host display at maximum resolution (4K30HZ) when remote controlling
- Works with any computer or device with HDMI output
- Material: Aluminum alloy

HDMI2.0V, RX460, GTX1050 or above is required for 4K resolution; Make sure the device is stand-alone graphics instead of integrated graphics.
